

AI STUDYBUDDY API

Customer Journey Map

Student and administrator journeys

TEAM ID	SWTID-2026-2776
TEAM SIZE	5
TEAM	Saisaran R (Leader); Dharanish R; Murugan G; Thirunavukkarasu D; Dhamothiran C
DATE	30 September 2026

Student setup

Install dependencies, configure MongoDB and Gemini credentials, and start the server.

Authentication

POST /api/auth/register and /login return access and refresh tokens in JSON in the supplied controller. The auth middleware expects Authorization: Bearer accessToken. Refresh uses x-refresh-token; logout is stateless.

Study material

Authenticated user uploads a file to POST /api/materials/upload, lists their materials, opens or deletes a material, and requests study aids.

Administrator

Admin-only routes list users, delete a user and their materials, and return total student/material counts.

Evidence

The ZIP provides source and README but no Postman collection, screenshots, or run results. package.json test script says no test is specified.
