

AI STUDYBUDDY API

Coding & Solution

Implementation summary from the uploaded code

TEAM ID	SWTID-2026-2776
TEAM SIZE	5
TEAM	Saisaran R (Leader); Dharanish R; Murugan G; Thirunavukkarasu D; Dhamothiran C
DATE	30 September 2026

Authentication

Registration prevents duplicate email, hashes password in User model, and returns access/refresh tokens. Login compares hash; refresh reads x-refresh-token; logout tells client to discard tokens.

Materials

Upload/list/get/delete are present. Students are filtered to their own list; get/delete check ownership; admin can access all. AI outputs are saved on the Material document.

AI study tools

Gemini helper uses gemini-2.5-flash. Controllers build prompts for summary, flashcards, multiple-choice quiz, and personalized study plan.

Admin

Admin-only routes list users without password, delete a user and their materials, and return student/material totals.

Implementation caveats

README describes HTTP-only cookies, but auth controller returns token strings in JSON and auth middleware expects Bearer access token. PDF upload is accepted but raw file bytes are read as UTF-8.
