

AI STUDYBUDDY API

Performance Testing

Test plan and current evidence status

TEAM ID	SWTID-2026-2776
TEAM SIZE	5
TEAM	Saisaran R (Leader); Dharanish R; Murugan G; Thirunavukkarasu D; Dhamothiran C
DATE	30 September 2026

Test targets

Measure health, auth, upload, material list/detail/delete, each Gemini operation, and admin endpoints. Test student and admin roles separately.

Functional checks

Verify valid/invalid token, forbidden role, ownership for every material route, duplicate registration, invalid upload extension, file above 5 MB, missing material, and AI malformed-response handling.

Performance method

Use isolated synthetic materials; record file size, content length, concurrency, repeated run count, median/percentile latency, errors, and Gemini model. Separate local processing from external model time.

Available test assets

package.json test script intentionally reports that no test is specified and exits with error. No test collection, test report, or execution evidence was supplied.

Security checks

Confirm role cannot be self-assigned and a student cannot access another user's material through summarize/flashcards/quiz/study-plan routes.

Reporting boundary

No test or performance result is claimed; collect actual outputs during verification.
