TEAM SIZE	5
TEAM	Saisaran R (Leader); Dharanish R; Murugan G; Thirunavukkarasu D; Dhamothiran C
DATE	30 September 2026

Included source

index.js, package.json/package-lock.json, README.md, src controllers/middleware/models/routes/utils. The archive contains a .env file; do not redistribute it.

Setup

README instructs npm install, configure PORT, MONGO_URI, JWT_ACCESS_SECRET, JWT_REFRESH_SECRET, GEMINI_API_KEY, NODE_ENV, then run node index.js.

Runtime note

package.json start script refers to nodemon server.js although README directs node index.js. Use the entry point present in the archive or correct the script before relying on npm start.

Uploads

The application creates uploads/ if absent. Multer writes temporary files there and the controller removes them after reading on successful flow.

Dependencies

Express, Mongoose, Gemini SDK, bcryptjs, jsonwebtoken, multer, dotenv, cors, and nodemon are listed in package files.
