Problem

Students may have materials in different formats and need structured ways to summarize and revise them. Administrators need basic user and material visibility.

Problem statements

- As a student, I need an account so that my study materials are private to me.
- As a student, I need to upload, list, view, and remove materials.
- As a student, I need summaries, flashcards, quizzes, and a study plan generated from a material.
- As an administrator, I need user listing, user deletion, and aggregate counts.

Scope boundary

Code supports .txt, .md, and .pdf filename extensions up to 5 MB, with Gemini-based learning aids. The provided source does not include a frontend or automated test suite.

Security questions to resolve

Public registration accepts a role field, and some AI material routes do not visibly perform per-owner checks. Role assignment and material ownership must be reviewed before real deployment.
